Thermal Resistance, Junction-to-Tab Measured on Anode Tab Adjacent to Epoxy	$R_{\theta JT}$	25	$^\circ\text{C}/\text{W}$
Maximum Device Temperature for Soldering Purposes (for 10 Seconds Maximum)	$T_L$	260	$^\circ\text{C}$

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.

1.  $V_{DRM}$  and  $V_{RRM}$  for all types can be applied on a continuous basis. Ratings apply for zero or negative gate voltage; however, positive gate voltage shall not be applied concurrent with negative potential on the anode. Blocking voltages shall not be tested with a constant source such that the voltage ratings of the devices are exceeded.
